Cybersecurity has gone from a technology issue to a business issue

In March many businesses were force to move to a work-from-home policy because of the pandemic, as many probably thought this would last just a few weeks or so. We know that is not the case for many as they are still working from home. This shift placed many business in a reactive mode to facilitate the remote workers. This has created a great deal of risk from a security standpoint. How can small business get prepared for the long haul?

In The News

Dumping passwords can improve your security -- really

Security keys, biometrics and a technology called FIDO are upgrading today's feeble security foundation.

Passwords suck.

They're hard to remember, **hackers** exploit their weaknesses and fixes often bring their own problems. **Dashlane, LastPass, 1Password and other password managers** generate strong and unique passwords for every account you have, but the software is complex. Services from **Google, Facebook and Apple** allow you to use your passwords for their services at other sites, but you have to give them even more power over your life online. **Two-factor authentication**, which requires a second passcode sent by text message or retrieved from a special app each time you log in, boosts **security** dramatically but can still be defeated.

One of your best lines of defense against cyber threats is to train your users

Educate your employees of the dangers of email phishing attacks

Old-school Security Awareness Training doesn't hack it anymore. Today, your employees are frequently exposed to sophisticated phishing and ransomware attacks.
