It's never too early to teach your kids about cybersecurity

Technology is here to stay, and it continues to advance and grow all the time. Because of its prominent place in the world, it can seem like today's generation is practically born with an iPhone in hand. In fact, as of 2015, **61% of children ages 3-18** had access to the internet at home. That number has undoubtedly increased today, as it's become more of a necessity thanks to everything from remote learning to teens **looking for careers in cybersecurity**.

In The News

Cyber-security Today: The Intersection of Technology and Behavior
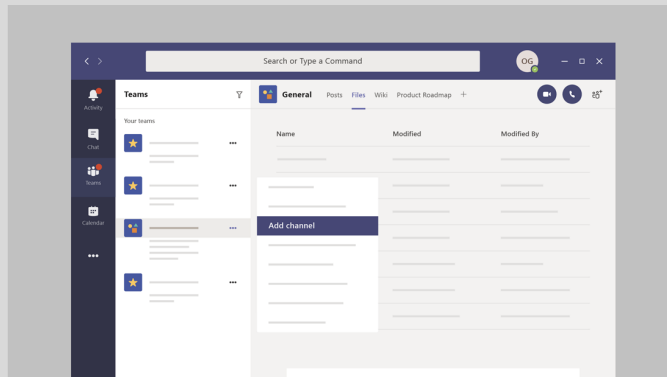

In the movie "Back to the Future II," protagonist Marty McFly travels forward to the year 2015. During a quick stop at Café 80s, Marty encounters two children, confused by the 80s-style arcade game in the store. When Marty shows them how to play, the kids retort with, "You mean you have to use your hands?"

We may soon have a generation of young internet users that quip, "You mean you have to use wires?"
