## COVID-19 Amplifies Existing Cybersecurity Crisis

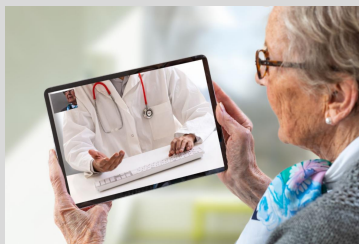

Back in the early days of the COVID-19 lockdown, Palo Alto Network hosted a webinar about how to run a remote **security** operations center (SOC). One of the first slides says "remote SOC's are the new reality," and it includes a photo of Matt Mellen, who heads **Palo Alto Networks'** SOC. He's working from home, running the \$950 million security company's SOC, with his adorable toddler sitting on his lap.

This is what 2020 work-life balance looks like. There is no balance, and there's really no hyphen, either. It all blurs together into one messy, exhausting event.

## In The News

### Telehealth is healthcare industry's biggest cybersecurity risk

The rapid adoption and **onboarding of telehealth** vendors led to a significantly increased digital footprint, attack surface, and cybersecurity risk for both provider and patient data, a new report released by **SecurityScorecard** and DarkOwl has shown.

## 5 Ways to bolster cybersecurity maturity

According to the 2020 **SolarWinds Public Sector Cybersecurity Survey**, only 57% of IT operations and security decision-makers from across the government identified their agency's cybersecurity functions as mature.

Respondents said budget constraints and a lack of confidence in their team's ability to keep up with evolving threats are the biggest roadblocks to cybersecurity maturity.

These responses aren't surprising. Just when security teams find ways to block a specific attack, bad actors pivot to new tactics and techniques. It's a constant game of cat and mouse, and it can feel like the rules are rigged against security professionals
